

Progress Report		
Group #6		
Group members	Jacob Hamade, Thomas Wilberding, Zack Moody	
Date	Student Name	Comment
1/26/2022	Group Leader: Jacob Hamade	We held two team meetings to discuss project ideas. In these meetings: we went through many websites of computer science project ideas, generated pros and cons, created a poll of our top ideas, eliminated our less popular ideas, and are in the middle of making a final decision.
2/9/2022	Group Leader: Jacob Hamade	<p><i>(Jacob was the group leader again for this progress report because Zack Moody was the group leader for the first week that followed the last progress report and Thomas Wilberding attended a wedding for this most previous week)</i></p> <p>Since group 6's last progress report, the group has successfully created an entire design in Figma of how the system will work on the front-end. We have also generated the entire database schema detailing each of our database tables and all of its fields along with the size of each field and the datatype of each field. Besides completing the project idea document and the project task 2 document, we have worked with a sample project using the Django framework in Visual Studio 2019. We have iterated through all of the pre-generated code files, reviewed them, changed settings, and generated a proof of concept with a database system that allows the user to log-in to the website.</p>

2/16/2022	Group Leader: Thomas Wilberding	<p>This week we have begun building the database and a couple of the website pages. We held a meeting early in the week, where we made sure that everyone had Github properly set up. Jacob Hamade will be constructing the architecture of the database, while Zack Moody and I will be building the home page and login page. I have been drawing the user diagrams, as well as searching for good html generators, so that designing the website is simpler.</p>
3/15/2022	Group Leader: Thomas Wilberding	<p>In this week, we have added 2 new features to the website. I added the create stub page, which allows users to create stubs to enter into the system. Jacob Hamade has been polishing the design of all of the webpages, so that they are compatible with mobile devices. Zack Moody has added the add organization page, which can only be used by admins. Zack has also added in more test data to be used. Next week, we plan on adding a page to view/edit and view the individual stubs. We also plan on stylizing the home page more.</p>
